Encore Electronics Receives Multiple orders from IBM

Saratoga NY, November, 2012-- IBM has chosen Encore Electronics to provide Area Alarm Controllers for its Essex Junction, Vt. Semiconductor Manufacturing facility. This Equipment plays a major role in monitoring specialty Gases within Semiconductor Tools. This order reflects IBM's expansion and upgrades to existing manufacturing tools.

The IBM site is involved in developing Masks, which is a film with the circuit pattern for Semiconductor Chips implanted on, as well as testing of them. They also manufacture the end product or Chip which are used in everything from cell phones to routers to supercomputers.

Encore's involvement signals a potential for additional orders to support IBM's Semiconductor Manufacturing Facility as they continue to keep their equipment and tools safe and efficient.
